### System

Floors - Tnemec 224 Deco-Fleck  
Walls - Tnemec 273 Stranlok ML

### Project Completion Date

August 2007

## Project Description

The engineering staff at Kroger Compton Creamery desired to refinish a production hallway over a three day shutdown that occurred over Labor Day. They required smooth, cleanable surfaces that were still aesthetically pleasing.

Polytech Industrial, Inc. was brought in to complete the work based on Kroger's previous experience with them on many other time critical projects.

A flake filled flooring system manufactured by Tnemec Company and fiberglass reinforced wall system also manufactured by Tnemec Company were installed during the three day downtime.

When production resumed, the only thing for Kroger staff to do was get back to producing premium quality milk and ice cream.

Another satisfied Polytech Industrial, Inc. customer.
