Project Summary

Substrate

Moisture Resistant Drywall

Surface Preparation

SSPC-SP 1 Solvent Cleaning

System

Tnemec Bio-Lastic / Tnemec 273
Stranlok ML

Project Completion Date

2008

Project Description

This project demanded a wall system that was sanitary, cleanable, resistant to frequent wash downs, and beautiful. The ceilings had to resist bacteria growth and provide vivid white color.

Created as a showpiece in the prestigious Napa Valley, it was made very clear that nothing less than perfection was going to be acceptable.

30,000 square feet of fiberglass walls and 60,000 square feet of Bio-Lastic ceiling was installed. The quality of work over these surfaces exceeded the demanding owners expectations.
