

## Project Case Study

### Owner

**Dole Fresh Vegetables**  
Thousand Oaks, CA

### Project

**Dole Fresh Vegetables**  
Soledad, CA

## Project Summary

### Substrate

Poured Concrete

### Surface Preparation

SSPC-SP 13/NACE No. 6 Surface Preparation of Concrete

### System

Flowcrete Flowfresh HF /  
Dex-O-Tex Cheminert K

### Project Completion Date

January 2010

## Project Description

Based on a 6 year history with Polytech Industrial, Inc. installing flooring at various locations throughout California, Dole engineers once again sought advice on flooring systems and installation procedures.

Adding a line to an already busy facility is not an easy task to complete. Especially when the project has a 10,000 sq. ft. footprint directly in the middle of operating production lines. Polytech Industrial, Inc. was able to contain, provide environmental control, prepare concrete, and install 10,000 sq. ft. of seamless flooring with little or no impact to the existing operation.

To date Polytech Industrial, Inc. have over 100,000 sq. ft. of seamless flooring installations for Dole Fresh Vegetables with none of the areas requiring any rework. Approximately half of the areas have been in service for greater than 5-years.
